

Sierra Chart Configuration

Prerequisite: Ensure Sierra Chart have activated PriceSquawk for your Sierra Chart user account. Request this via the Sierra Chart Support Forum [here](#).

1. Ensure DTC Server is enabled in your platform and also that PriceSquawk integration is enabled on your Sierra Chart account

2. Set this to **Yes** to send available symbols to PriceSquawk Control Centre
3. If changing the Sierra Chart port setting from the default port 11099, then locate the following configuration file in your PriceSquawk install directory (e.g. *c:/Program Files (x86)/PriceSquawk/PriceSquawk.UI.exe.config*) and edit this setting to match the port you want to use for Sierra Chart:

```
<add key="DtcPort" value="11099"/>
```

4. Set Require Authentication to **No** (see point 5 on limitations). If setting to **Yes** you will need to configure your Sierra Chart username and password in the above file (see point 2):

```
<add key="Username" value="<SC username>"/>
```

```
<add key="Password" value="<SC password>"/>
```
